Complete appliances packaged in strong storage boxes – Only requiring gas and water.

Kariba Combo – K1-EI 4.1L – Brushed Stainless Steel

PRODUCT DESCRIPTION

The Kariba Combo K1 EI 4.1L model has evolved over the past fourteen years. The latest version is based on our original Kariba “Bos Stort” Camp Shower model. This unique model is the pioneer of camping water heaters in the World. The appliance is renowned for its robust design and exceptional performance to cater for larger groups of campers and 4x4 adventures. The appliance incorporates a powerful gas burner which is manually controlled for safety and reliability. The burner includes a user friendly Italian electronic “push button” flame ignition system. This appliance delivers a controlled rising of the ambient water temperature up to 45 degrees and above centigrade by adjustment of the on/off gas control valve. This control knob determines the flame height to the heat exchanger in order to reach a desirable water temperature. The appliance delivers up to six **HOT** showers per hour, or can even be used as a back-up to run a bath when power outages occur at home. The water supply can be connected to a hose from a tap when limiting the flow rate, or by making use of the German quality 12V DC submersible pump kit supplied as standard equipment. This pump delivers a water flow of 4.1L per minute at a head height of two meters. The pump can fit into a 20L water Jerry Can cap, and the water flow can be restricted if necessary. The appliance features an independent slide out burner / cooker with fold-up cooker grids which accommodates a large pot or pan for cooking. This model is the preferred choice by 4x4 off-road safari adventures and overland expeditionary. The Kariba Combo K1-EI remains the exclusive leader of its kind in the World. As this appliance is operated by gas, responsible operation is advised.
