PRODUCT DISCRIPTION

Kariba Combo K2 EI 4.1L was designed with input gained from customers over the past twelve years. The original concept and unique features of our Kariba Combo model K1-EI have filtered through to this model to render historic performance and reliability. Added to this, more features have been incorporated in the design to offer a complete one piece dual purpose appliance manufactured for outdoors use, camping and overland adventures. This user friendly gas appliance incorporates a powerful gas burner which is manually controlled for safety and reliability, and which includes a user friendly Italian made electronic “push button” flame ignition system. The top body incorporates a heat exchanger which pivots upwards ninety degrees to reveal a cooker which can accommodate a large pot or pan for cooking. This model delivers a controlled rising of ambient water temperature up to 45 degrees and above centigrade by adjusting the on/off gas control valve. The gas control knob determines the flame height to the heat exchanger and which can deliver up to six **HOT** showers per hour. During power outages at home, this model can also be used as a back-up to run a bath or cook a meal. The water supply can be connected to a hose from a tap if limiting the water flow. Alternatively the German quality 12V DC quality submersible pump kit can be made use of, and which is supplied as standard equipment. The pump delivers 4.1L water flow per minute at a head height of two meters. This pump can fit into a 20L water Jerry Can cap, and the water flow can be restricted when necessary. This “all in one” appliance allows for a table top cooking application, showering, washing of dishes and clothing for example when being used outdoors and during camping. The Kariba Combo K2-EI 4.1L is the flag ship in the Kariba range of appliances, preferred by camper trailer owners, mobile homes and holiday home owners for its compact and unique features. A worthy pioneer and a popular choice by customers of our Kariba Products range. As this appliance is operated by gas, responsible operation is advised.
